I am an OTR truck driver and I depend on the information that I receive from XM Radio for traffic and weather conditions to make decisions that will effect the safety of everyone on the road. If the government is so concerned about the safety of OTR truck drivers and four wheelers then it would make good sense to re-think this decision. As far as I am concerned this is just another freedom being taken away from the average american. I pay for this service, a company provides this service, what is the problem?
